

WebEx[®] Adapter for the Summit[®]

Seamlessly Integrate High Quality Audio Conferencing

WebEx has become a powerhouse in the collaboration industry. But despite its worldwide reach and recognition, many users still prefer the quality, reliability, and scalability of a dedicated platform for audio conferencing.

In the past, users would have to choose between the two, but now, they can enjoy the benefits of both with the WebEx adapter for the CONTEX Summit[®] and Summit Olympus[™].

Functionality

With the WebEx adapter, you are able to deeply integrate the high quality audio conferencing capabilities of the Summit media processor with the WebEx cloud service offering.

- **Single Interface Management:** With the WebEx adapter, users are able to control their audio conference (hosted on the Summit) directly through WebEx. Users effortlessly manage all aspects of the meeting from the WebEx interface.
- **Integrated Audio Conference Control:** Users initiate/end the audio or data conference, lock/unlock the conference, initiate sub-conferencing, and more with just a few clicks in the WebEx interface.
- **Join Options:** Hosts can dial-out to a specific party via the WebEx interface or have participants dial-in directly to the Summit to join the audio portion of the conference. All parties appear in the WebEx roster.
- **Participant Control:** Parties can mute/unmute their own audio line (on the Summit) using the WebEx controls. Similarly, conference Hosts can mute/unmute participants or disconnect a party at any time.
- **Active Talker Notification:** The WebEx adapter enables active talker notification within the WebEx interface – allowing users to always know who is speaking.

Additional Benefits

Along with integrating WebEx with the high quality audio conferencing capabilities of the Summit, there are a number of additional benefits enabled by the WebEx adapter:

- **Extending the Audio Conference:** When a WebEx session is terminated, the Host of the conference is prompted to continue the audio portion of the call (hosted on the Summit). This unique feature gives the Host the freedom to continue the conversation, without keeping the data conference active.
- **International/Locality Dial-out Rules:** Country code and phone number rules can be specified within the WebEx adapter to aid with dial-out. All numbers are compared to the guidelines and adjusted prior to dial-out to avoid failures when dialing internationally.
- **Real-Time Audio Billing Data:** By integrating with WebEx, you can harness the real-time audio billing capabilities of the Summit.
- **Recording on the Dedicated Platform:** With the WebEx adapter, Network Based Recording (NBR) can be conducted against the Summit system. This combines Summit Audio with WebEx data into a single file for consumption.
