FOR IMMEDIATE RELEASE

Compunetix Presenter™ Adds Over-the-Top Voice Collaboration

Monroeville, Pa., June 11, 2014 – Compunetix, Inc., the leading provider of advanced unified collaboration solutions, is excited to introduce the latest version of CONTEX Presenter™ web meeting software. Presenter 5.10.0 includes new features to enhance the reach and accessibility of group communications and increase end user productivity. Presenter works seamlessly within the CONTEX Summit® UC environment for unparalleled desktop or application sharing. The newest Presenter interface now allows users to forgo the landline or mobile phone connection and make use of the integrated speaker, microphone, or headset on their computer or tablet to participate in the call. Presenter's over-the-top (OTT) voice delivery enhances ease-of-use and portability for intuitive functionality. Users are able to connect and join their call via an integrated desktop IP audio client, adjust the speaker and microphone levels, and view and manage all meeting audio controls.

The 5.10.0 software release also enables moderators to upload presentations to the solution's cloud-based user portal and share them via Presenter. This portal serves as a repository for PowerPoint presentations that can be accessed from anywhere via the Presenter desktop client – streamlining and mobilizing the collaboration experience.

With available clients for Windows, Mac OS and iPad, CONTEX Presenter is poised to drive the next generation of group collaboration. Accessible by team members regardless of location, Presenter delivers on the promise of complete and flexible collaboration from mobile devices.

"Our Presenter product, with its new OTT integrated voice component, continues to provide a simple, straight-forward web sharing experience for desktop and mobile users alike," states Gerard Pompa, Senior Vice President and Communications Systems Division Manager at Compunetix.
